CAPSTONE PROJECT GAP ANALYSIS

(node-level steps: headers, retries, error routing).

- D. Produce the small scoring unit-test harness (Node/Python script) for Julian.

Which option do you want me to do now?

GPT-5 mini • 0x

Question 1: Project name and problem solved

My project is the Threat Intelligence Feed Dashboard. It automates the collection, AI summarization, IOC extraction, and relevance scoring of threat data so security analysts can prioritize high-risk alerts without manual triage.

Question 2: Your role/component

I am the owner of Component 4. My role handles Integration, Testing, and Presentation. I ensure the data flows correctly from n8n through Flowise into Airtable, and I am building the final dashboard to display the prioritized threats.

Question 3: Airtable schema and status

>

Prepare follow-up tasks (5/10)
